Version Status Revision Summary

V1.6	Frozen	Initial Canonical Baseline establishing the overall philosophical framework of the Universe Crystal project.
V1.7	Frozen	Clarified the ontological definition of Open Texture . Open Texture was formally defined as the Geometric Existence of an Organizational Interaction . The chapters on Time and Canonical Conclusions were updated accordingly, while the First Principles, Organization Hierarchy, and Dynamics remained unchanged.
V1.8	Frozen	Introduced the Universe Crystal Grand View and formally established the Organizational Interpretation Principle , forming the three-layer theoretical structure of Framework – Ontology – Epistemology . The First Principles, Organization Hierarchy, Dynamics, and existing Ontology remain unchanged. This revision focuses on improving overall theoretical consistency.
V2.0	Frozen	Established the Texture Evolution framework, introducing three fundamental texture modes: Open Texture , Self-Closed Texture , and Interlocking Texture . Unified the theoretical definition of Texture as the medium of Relationship Propagation . Established the formation mechanisms of First Level Organization and Second Level Organization . Introduced the concepts of Organizational Degree of Freedom and Organizational Space , and proposed the normative description that relationship propagation paths across multiple organizational degrees of freedom become integrated through Interlocking Texture , forming an overall closure that locks a stable organizational topology and gives rise to Second Level Organization .

1. First Principles

At present, the Universe Crystal framework recognizes four First Principles.

These First Principles establish the fundamental ontological objects upon which the entire framework is constructed. They do not attempt to describe every phenomenon in the universe, but provide the minimal conceptual foundation required to explain how organization, identity, and increasingly complex structures emerge throughout the evolution of the Universe Crystal.

1.1 Open Texture

Open Texture is the most fundamental organizational texture generated through interactions between organizations.

It is not matter.

It is not energy.

It is not a field.

Nor is it a trajectory through space.

Open Texture is the Geometric Existence of an Organizational Interaction.

Every organizational interaction gives rise to an Open Texture, which permanently becomes part of the organizational structure of the Universe Crystal.

Therefore, every Open Texture belongs to the Universe Crystal as a whole.

There is no such state as an interaction that is "half propagated."

Open Texture constitutes the Fundamental Organizational Texture of the Universe Crystal.

Every organizational interaction possesses a geometric mode of existence.

This geometric mode of existence is called Open Texture.

1.2 Stable Closed Texture

A Stable Closed Texture is formed when an Open Texture achieves Stable Closure.

This gives rise to the First-Level Stable Closed Texture.

Within the current framework, electrons and quarks are regarded as research objects belonging to the First-Level Stable Closed Texture.

Closure is neither a closure in space nor a closure in time.

It is a Stable Closure within the Whole Crystal across all space-time.

1.3 Organizational Degree of Freedom

An Organizational Degree of Freedom is not a classical spatial dimension.

It is defined as a fundamental organizational degree through which the Fundamental Organizational Texture forms different stable organizational structures.

At present, the following fundamental properties are proposed to originate primarily from Organizational Degrees of Freedom:

- Spin
- Electric Charge
- Mass

1.4 Organization Hierarchy

The universe evolves through the continuous emergence of higher levels of organization.

Its evolution is not characterized by the continuous creation of new fundamental particles.

2. Texture Evolution

Texture is the fundamental medium through which Relationship Propagation occurs within the Universe Crystal.

It also serves as the fundamental mechanism through which organizations are formed.

As organizations continue to evolve, Texture exhibits different patterns of relationship propagation.

These patterns do not represent different kinds of textures.

Instead, they describe different modes through which relationships propagate across different organizational levels.

The Universe Crystal framework currently recognizes three fundamental Texture Patterns.

2.1 Open Texture

Open Texture is the most fundamental Texture Pattern.

An Open Texture consists of two open ends, representing one complete Open Event.

Open Texture is capable of propagating relationships.

However, since relationship propagation has not yet formed a closure, no stable organization can emerge.

2.2 Self-Closed Texture

When the relationship propagation path of an Open Texture continuously returns to itself, a Self-Closed Texture is formed.

The relationship propagation path completes a Self Closure, eliminating the open ends and establishing a continuous and stable propagation loop.

This continuous closure gives the organization a persistent Identity and forms the First-Level Organization.

Therefore,

Self-Closed Texture forms the First-Level Organization through the self-closure of the relationship propagation path.

2.3 Interlocking Texture

When multiple First-Level Organizations further organize into a higher-level organization, a new Texture Pattern emerges: Interlocking Texture.

Each First-Level Organization remains complete and occupies an independent Organizational Degree of Freedom.

Within each First-Level Organization, Identity continues to be maintained by its own Self-Closed Texture.

Interlocking Texture is neither a direct connection nor a physical overlap between First-Level Organizations.

Instead, it coordinates the continuous propagation of relationships among multiple First-Level Organizations, allowing relationship propagation to circulate across multiple Organizational Degrees of Freedom.

As relationship propagation continues, the overall propagation path eventually forms a Collective Closure.

The Collective Closure of the propagation path locks a Stable Organizational Topology, giving rise to a new Second-Level Organization.

Therefore,

Interlocking Texture forms the Second-Level Organization by coordinating the Collective Closure of relationship propagation among multiple First-Level Organizations.

2.4 Organizational Degree of Freedom

Every First-Level Organization corresponds to an independent Organizational Degree of Freedom.

An Organizational Degree of Freedom represents the independent organizational dimension through which a First-Level Organization maintains its continuous organizational activity.

It is not a coordinate in geometric space.

During the formation of a Second-Level Organization:

- Every First-Level Organization remains complete.
- Every First-Level Organization occupies an independent Organizational Degree of Freedom.
- Every First-Level Organization maintains its own Self-Closed Texture.
- Interlocking Texture coordinates the continuous propagation of relationships among multiple Organizational Degrees of Freedom.
- The relationship propagation paths across multiple Organizational Degrees of Freedom eventually form a Collective Closure.

Therefore,

A Second-Level Organization is not established through direct connections between First-Level Organizations.

Instead, it emerges when relationship propagation across multiple Organizational Degrees of Freedom forms a Collective Closure.

2.5 Organizational Space

When relationship propagation across multiple Organizational Degrees of Freedom completes a Collective Closure, a stable Organizational Topology emerges.

This topology gives rise to the first continuous Organizational Domain.

An Organizational Domain possesses:

- Interior
- Boundary
- Exterior

These properties are not pre-existing geometric space.

Instead, they naturally emerge from the Collective Closure of relationship propagation.

Therefore,

Space is not a prerequisite for organization.

It is an Emergent Organizational Property arising from the Collective Closure of relationship propagation.

2.6 Texture Evolution Sequence

The Texture Evolution recognized by the Universe Crystal framework is:

Open Texture

↓

Self-Closed Texture

↓

Interlocking Texture

The corresponding Organizational Evolution is:

- Open Texture → Open Event
- Self-Closed Texture → First-Level Organization
- Interlocking Texture → Second-Level Organization → Organizational Space

3. Organization Hierarchy (Frozen)

The Universe Crystal framework describes the evolution of the universe as the continuous emergence of increasingly higher levels of organization.

Rather than continuously introducing new fundamental particles, the universe evolves through the formation of increasingly complex organizational structures.

Level 0

Open Texture

↓

Level 1

First-Level Stable Closed Texture

Examples:

- Electron
- Quark

Characteristics:

- Point-like particles;
- Stable Closure;
- No volume;
- Independent Identity.

↓

Level 2

Second-Level Organization

Examples:

- Proton
- Neutron

Characteristics:

- Stable organizations formed by multiple First-Level Stable Closed Textures;

- The first emergence of physical volume;
- The first emergence of organizational Identity;
- The first emergence of spatial degrees of freedom.

↓

Level 3

Third-Level Organization

Example:

- Atom

Characteristics:

- Formation of chemical elements;
- Emergence of chemical properties;
- Organizational level at which chemical reactions occur.

↓

Level 4 and Above

Examples include:

- Molecules;
- Life;
- Consciousness;
- Society;
- Higher organizational systems.

These represent the continuous upward emergence of organizational complexity.

4. Electron Baseline (Frozen)

Within the current framework,

an Electron is defined as a First-Level Stable Closed Texture.

The unified model is summarized as follows.

Stability

Originates from Stable Closure.

Point-like Nature

Represents the local manifestation of a globally stable closure.

Spin

Originates from Stable Organizational Closure.

Electric Charge

Originates from Organizational Degrees of Freedom.

Mass

Represents the holistic property established after Stable Closure is achieved.

All electrons are identical because their mode of Stable Closure is unique.

5. Organizational Laws (Frozen)

First-Level Closure

First-Level Closure establishes Existence.

Stable Closure gives rise to stable Identity.

Identity comes from Stable Closure.

Second-Level Organization

Second-Level Organization establishes organizational stability.

Third-Level Organization

Third-Level Organization establishes chemical elements and chemical properties.

Higher organizational levels continue to emerge through organization.

The evolution of the universe follows a common principle:

Stability is achieved when higher-level organizations form new Stable Closures.

6. Crystal Evolution (Frozen)

The universe underwent a fundamental phase transition.

During this transition,

First-Level Stable Closed Textures, including electrons and quarks, were formed.

Afterwards,

no new First-Level Stable Closed Textures are created.

Subsequent cosmic evolution is therefore characterized primarily by the continuous enrichment of higher levels of organization.

The Universe Crystal never overwrites its own history.

Previously formed textures are never removed.

The Universe Crystal can only continue to grow.

7. Dynamics (Frozen)

Chemical Reactions

Chemical reactions occur at the level of Third-Level Organization.

Their essence is the reorganization of Third-Level Organizations.

Throughout this process:

- First-Level Stable Closed Textures remain unchanged.
- Second-Level Organizations remain unchanged.

A chemical bond is not a new First Principle.

Rather, it is an organizational structure through which Third-Level Organizations jointly organize First-Level Stable Closed Textures.

Nuclear Reactions

Nuclear reactions occur at the level of Second-Level Organization.

Fusion

Fusion is the reorganization of Second-Level Organizations.

Fission

Fission is likewise the reorganization of Second-Level Organizations.

Throughout both processes,

First-Level Stable Closed Textures remain unchanged.

Principle of Organizational Stability

The lower the organizational level,
the greater its stability,
and the higher the threshold required for reorganization.

Conversely,
the higher the organizational level,
the more readily reorganization can occur.

Accordingly:

- Level 1: Nearly invariant.
- Level 2: Nuclear reactions.
- Level 3: Chemical reactions.
- Higher Levels: Increasingly dynamic organizational evolution.

8. Organizational Interpretation Principle

Core Definition

Every organization can form its own organizational state only on the basis of the propagation relations within the organizational system to which it belongs.

Based on these organizational relations, it produces its own interpretation of the universe.

Therefore,

every output generated by an organization is, in essence, an Interpretation formed according to the propagation relations within its organizational system.

It is not the Universe Crystal itself.

Corollary 1 — Organizational Interpretation

Observation is not an ability unique to consciousness.

Any organization capable of forming an organizational state and producing an output performs Organizational Interpretation.

This includes, but is not limited to:

- Particles;
- Atoms;
- Molecules;
- Crystals;
- Biological organizations;
- Scientific instruments;
- AI systems;
- Consciousness systems;
- Scientific communities.

The only difference lies in their respective levels within the Organization Hierarchy.

Corollary 2 — Experimental Measurement

Experimental measurement is a form of Organizational Interpretation.

The outputs of scientific instruments, including:

- Voltage;
- Electric current;
- Images;
- Spectra;

- Experimental data;

are not the Universe Crystal itself.

They are interpretations generated according to the organizational structure of the measuring instrument.

Corollary 3 — Scientific Theory

Scientific theories are forms of Organizational Interpretation.

Through the continuous accumulation of propagation relations,
the scientific community continually develops new interpretations of the universe.

Therefore,

scientific theories are not the Universe Crystal itself.

They are organizational interpretations constructed by the scientific community.

Corollary 4 — Consciousness

Consciousness is also a form of Organizational Interpretation.

Based on the propagation relations within its own organizational system,
consciousness constructs:

- Experience;
- Memory;
- Understanding of the world;
- Understanding of time;
- Understanding of meaning.

Therefore,

every understanding of the universe produced by consciousness remains an organizational interpretation.

9. Organizational Reading (Frozen)

Every measurement is an act of Organizational Reading.

Reading is not exclusive to consciousness.

Every measuring device acquires information by progressively reading organizational relations.

Organizational Reading is the fundamental process through which an organization constructs an interpretation.

It serves as the bridge through which the classical world emerges.

10. Time (Frozen)

Time is not a First Principle.

As the geometric existence of an organizational interaction, Open Texture itself possesses no time.

For example,

light emitted by a galaxy 2.5 million years ago is, at the fundamental level,

nothing more than a complete Open Texture connecting two closed organizations.

The "2.5 million years" is not a duration experienced by the Open Texture itself.

Rather,

it is a macroscopic relation that emerges after Organizational Reading progressively interprets the underlying organizational structure.

Therefore,

time belongs to a higher-level description produced through Organizational Interpretation.

It is not a fundamental object of the Universe Crystal.

11. Space (Frozen)

Open Texture possesses:

- No length;
- No distance;
- No direction.

A First-Level Stable Closed Texture possesses:

- No volume.

Consequently,

no spatial degrees of freedom exist at the First-Level Organization.

Spatial degrees of freedom first emerge within the Second-Level Organization.

This is because Second-Level Organizations are the first to possess:

- A stable scale;
- Organizational boundaries;
- Physical volume.

Therefore,

space is not a First Principle.

Space emerges as the macroscopic geometric manifestation of higher-level organizations.

Ultimately,

macroscopic organizations manifest as three-dimensional space.

12. Framework, Ontology, and Epistemology

The Universe Crystal framework consists of three corresponding theoretical layers.

Layer 0 — Framework

Question

How should the continuously evolving universe be understood as a whole?

Answer

Universe Crystal is the theoretical framework that describes the overall organizational structure of the continuously evolving universe.

It is not the universe observed by any particular organization.

Layer 1 — Ontology

Question

Why can organizations exist?

Answer

Identity comes from Stable Closure.

Stable Closure gives rise to stable Identity.

Layer 2 — Epistemology

Question

How do organizations understand the universe?

Answer

Interpretation comes from Organizational Relations.

Organizations construct interpretations according to the propagation relations within the organizational systems to which they belong.

Together,

these three layers constitute the fundamental theoretical architecture of the Universe Crystal framework.

13. Canonical Conclusions (Frozen)

The Universe Crystal framework currently establishes the following unified conclusions:

- Universe Crystal is a theoretical framework that describes the overall organizational structure of the continuously evolving universe.
- Open Texture is the geometric existence of an organizational interaction and constitutes the Fundamental Organizational Texture of the Universe Crystal.
- First-Level Stable Closed Texture provides a unified interpretation of electrons and quarks.
- Identity comes from Stable Closure.
- Organizational Interpretation comes from Organizational Relations.
- Spatial degrees of freedom first emerge within the Second-Level Organization.
- Macroscopic organizations ultimately manifest as three-dimensional space.

- Time is a higher-level description produced through Organizational Interpretation rather than a fundamental object of the Universe Crystal.
- Organizational Degrees of Freedom provide a unified interpretation of the fundamental quantum properties.
- The stability of Second-Level Organizations originates from stable topological organization.
- The universe continuously evolves through the emergence of increasingly higher levels of organization.
- The Universe Crystal is a Whole Crystal across all space-time, and its history is non-removable.
